

DISPATCH

Routes and deliveries, simplified.

TAKE THE HASSLE OUT OF YOUR SHIPPING OPERATIONS.

What is Dispatch?

Dispatch simplifies complicated shipping processes, saving you time as you create, assign, and track routes. Available on Desktop and Mobile devices, it's designed to give you a bird's-eye view over the entire shipping process, from establishing and tweaking routes, to communicating with drivers without lags or wait time, to keeping you in the loop on where your packages are at any given moment.

You should use Dispatch if:

- Scheduling shipments and routes is a tedious process
- Visibility into your shipments is limited
- You have difficulty communicating with drivers while they're on the road

What does Dispatch look like in action?

Dispatch isn't just a tracking tool — it's optimized to make every part of the delivery process simple and easily repeatable. View all scheduled delivery routes from one window, and use the drag-and-drop functionality to update, remove, or reschedule routes in a matter of seconds. Easily compare drivers' availabilities, and set up check-in and check-out points for updated delivery statuses while they're en route.

With Dispatch, you can:

- Save static routes to use as templates
- Calculate weight and other package data
- Plan driver pools
- Color-coordinate routes for easy scheduling
- Store all driver and route information in one hub

How does Dispatch help you save money?

Dispatch is an olympic-grade time saver that streamlines your route planning into a lean, money-saving machine. By clearly displaying route, truck, and driver schedules on the Dispatch Board, Dispatch makes it easy to spot time-saving delivery options that allow you to more efficiently manage your trucking schedule. Easily relieve drivers, refine routes, schedule rest stops, and more. View the schedule for one day or for weeks at a time — whatever helps you get the job done.
