

DATA COLLECTION™

Take full control of your warehouse.

BOOST PICK AND PACK ACCURACY WITH THIS BARCODING TOOL.

What is DataCollection™?

DataCollection™ is a warehouse management application that captures and stores data about each of your products, making easy work of your picking and packing process. DataCollection brings action and analysis into one interface, allowing you to manage active orders or keep tabs on inventory while it's still on the shelves.

You should use DataCollection if:

Your staff has troubles with human error and inaccurate orders

Your picking and packing process are mostly manual

Inventory visibility is limited and stock counts are unreliable

What does DataCollection look like in action?

When it comes to all things inventory, DataCollection packs a big punch. Users can scan products to get accurate stock counts every time, but the advantages don't stop there. You can also receive purchase orders and automatically create receipts, make inventory adjustments, take stock counts, and a whole lot more. It's accessible on the mobile device of your choice, making it easy to carry around the warehouse. DataCollection is optimized to take your order fulfillment process to the next level.
