

SHIPCENTER™

Shipping made simple.

GET UNMATCHED VISIBILITY OVER EVERY SHIPPED ORDER.

What is ShipCenter™?

ShipCenter™ is an all-in-one shipping feature that eliminates the need to go through middleware shipping programs such as UPS WorldShip or FedEx Ship Manager. Instead of spending time tracking down shipping information or hopping systems, use one solution to manage your entire shipping process. From order entry to invoice collection to tracking a package once it's on the road, ShipCenter has you covered.

You should use ShipCenter if:

- Your shipment management requires input from multiple systems
- Shipment tracking is fragmented or unreliable
- You use little to no workflow capabilities for your shipping process

What does ShipCenter look like in action?

By bringing all your shipping operations and related data under one roof, you'll be able to ship more efficiently and more accurately than ever before. Once you've picked, packed, and shipped your product, ShipCenter will automatically generate all the necessary shipping and tracking information to your sales documents. And with the help of your well-designed workflow, tracking information and invoices can be quickly sent to your customers. ShipCenter gives complete visibility over the package's progress, whether it's ready-to-ship or it has already been sent out for delivery.

With ShipCenter, you can:

- Quote and compare rates from supported LTL and parcel carriers
- Create custom packages and reusable templates
- Choose from a long list of supported carriers
- Connect scales to weigh packages
- Coordinate your shipping with the help of specialized scripts and plugins
